## DETAILED ACTION

### *Election/Restriction*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-17, drawn to a method for detecting a nucleic acid target, classified in class 435, subclass 91.1.
  - II. Claim 18, drawn to a method for forming a primer pair, classified in class 435, subclass 6.
2. The inventions are distinct, each from the other because of the following reasons: ~~Inventions~~  
I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation leading to different effects. For example, the invention of Group I is drawn to a method of detecting a target nucleic acid via a polymerase chain reaction whereas the invention of Group II is drawn to a method for forming a primer pair via a sequencing and labeling reaction. The different invention have different method steps and require different fields of search.
3. Because these inventions are distinct for the reasons given above and the search required for any one Group is not required for any other Group, restriction for examination purposes as indicated is proper.

Art Unit: 1637

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
